

IN THE CLAIMS:

Please amend claim 1 as follows:

1. (Currently Amended) A liquid crystal display comprising:
a display part displaying an image in accordance with image display data supplied through data signal lines; and
a driving part driving each data signal line of said data signal lines by using a plurality of driving devices together simultaneously so as to increase the driving capability, wherein said plurality of driving devices are disposed on the same side of the data signal lines,

wherein the number of the driving devices used for driving each data signal line is controlled in accordance with a particular type resolution and/or a size of said display part, and

wherein control of the number of driving devices is made with the use of a switch signal.

2-3. (Cancelled)

4. (Original) The liquid crystal display as claimed in claim 1, further comprising a wiring part provided on a substrate on which said display part is formed, said driving devices being connected to said signal data line in said wiring part.

5-12. (Cancelled)
